Milieuvervuiling door oorlog en het militaire gebruik van giftige stoffen veroorzaken ernstige schade aan de natuur en alle levende wezens. De militaire bijdrage aan de klimaatcrisis wordt onderschat. Welke "juridische" manieren bestaan er om het milieu en het klimaat te beschermen?

Environmental pollution by war and the military use of toxic substances cause serious harm to nature and all living creatures. The military contribution to the climate crisis is underestimated. What "legal" ways exist to protect the environment and the climate?
